Matthew Wolstoncroft

Strategic product leader with deep experience building AI-powered products from 0-to-1 — not just defining strategy, but personally shipping across design and code. Combines systems thinking, interaction design, and firsthand AI fluency to translate complex capabilities into products users actually trust and adopt.

2026 - Present	Cengage - Senior UX Manager	Drove product strategy and UX for Content Studio, an AI-powered content personalization platform that enables educators to transform course materials by reading level, language, and learning accommodations — positioning Cengage at the forefront of adaptive edtech Owned the end-to-end product experience from problem identification through delivery, defining user workflows, writing functional requirements, and collaborating directly with engineering on implementation using React Magma component libraries Championed an AI-first product philosophy, embedding generative AI capabilities as core product differentiators rather than bolt-on features, and establishing UX principles for responsible AI use in educational contexts
2025 - Present	LabNotes.ai - Co-founder	Co-founded LabNotes.ai with a higher-ed STEM professor, combining deep domain expertise in pedagogy with full-stack product and AI capabilities to build an AI-powered tutoring and homework platform from zero to deployed product Established AI experience principles including trust boundaries, appropriate AI assistance levels, and guardrails that ensure the AI tutor guides rather than gives answers, balancing pedagogical integrity with usability Architected the full AI experience layer, designing prompt chains, trust boundaries, and escalation logic that dynamically adjust assistance levels based on student behavior — solving the fundamental tension between helpfulness and pedagogical integrity Shipped end-to-end as a technical co-founder, building production-quality front-end interfaces, integrating LLM APIs, designing the data model, and deploying the platform — demonstrating the ability to operate across the entire product stack without dependency on external teams
2022 - 2025	SeekWell - Senior Product Designer	Owned the end-to-end product experience for first to market AI-powered mobile health-tech platform across iOS, Android, and Web, driving the sign-up and engagement strategy through a continuous experimentation framework Built and ran the experimentation roadmap for onboarding and vision Rx purchase flows, personally designing A/B tests, defining success metrics, analyzing behavioral data, and making ship/no-ship calls — compressing the typical PM + designer + analyst workflow into a single seat Reduced time-to-value in the core conversion funnel by restructuring the onboarding architecture based on quantitative drop-off analysis and qualitative user research, directly improving retention and purchase completion rates
